Dear Sol:

and generous!  
Thanks ever so much for your prompt/reply to my appeal.

It turns out I was hopelessly optimistic about being able to extract the time to do any preliminary experiments here. However, I will carry the materials along and see what I can do.

Can I ask just one more favor? Except for the rush, I'd develop the mutants myself, but could you send me a lyophil tube of the marked donor culture? As we're just about to leave, it would be most prudent if you airmailed it to me c/o my brother Seymour (Prof. S. Lederberg, Department of Bacteriology, University of California, Berkeley 4, California) whom we'll be visiting for a few days en route.

Yours,

  
Joshua Lederberg
